Webserver in Perl - Casey West

Web development with Perl is often tied to the Apache web server, which makes developing web applications difficult in some cases. In this talk we'll discuss how to get a CGI environment running with almost zero work, using a pure perl webserver. We'll also learn a few tricks to get a static webserver running with a single command, and learn how to run an HTML::Mason compatible webserver.

Finally, creating customized webserver will be discussed, and you will know how to create web environments with little or no work.

Into GNU/Screen - Robert Blackwell

GNU Screen is an open-source terminal multiplexer developed by the GNU Project. It allows a user to access multiple separate terminal sessions inside a single terminal window or remote terminal session. It is useful for dealing with multiple programs from the command line, and for separating programs from the shell that started the program.

You will learn what screen is and how it can help, as well as a few tricks to be more productive using screen.

Upcoming Meetings

Wednesday, March 8th, 2006

Profiling Perl - Dan Wright
Screen Hackery - Robert Blackwell

Wednesday, April 12th, 2006

Red Flags: Code Review World Tour - Mark Jason Dominus, Special Guest

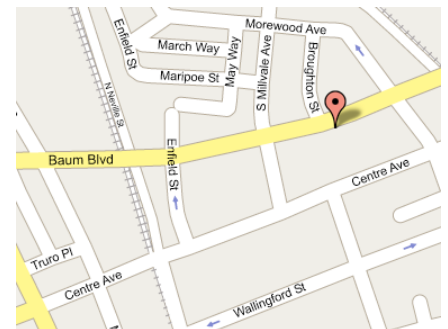

Location

Slaymaker Systems, Inc.

4914 Baum Blvd

Pittsburgh, PA 15213

Meeting Time

7:00pm

About the Group

Perl is a general purpose programming language originally developed for text manipulation. Its use has since moved into a wide range of tasks including system administration, web development, network programming, GUI development, and much more. Just as Perl's interests are varied, the Pittsburgh Perl Mongers are. Join us and share your skills and interests.
